

Changing the Paradigm

Nivel A's UpgradEDU for 3 years, including Chromebooks & Rocketbooks. This program includes support & consultation on the organization & administration as well as infrastructure for the school's domain, PD Training on G Workspace & 3rd party apps

The challenge

Chalkboard was the main tool, up to now, the school was a quality institution due to the training processes and support, but we were neglecting technology integration for the new generations of students, and from there the idea of a Department of Educational Technology Innovation. We looked for the best option that would help us with technology education without neglecting the academic quality.

The solution

Nivel A is in charge of the adoption of Google Workspace, infrastructure and implementation of 1:1 teams at some levels. Teachers have been trained in G Workspace through the implementation of training cycles and personalized meetings with their assigned coach. Teachers are integrating what they have learned and preparing for the Certifications that Google for Education offers.

The results

The certification and preparation of teachers to become a Google Reference School, but above all the educational commitment to innovate & lead, continue generating content with all the tools we have to be able to provide a service according to the needs of students & families; integrating different strategies, including GWorkspace, through which educational community creates appropriate content.

UpgradeEDU is really worth the cost-benefit, establishing a safe environment for students and for parents has had very important satisfactions of success.

About Cumbres International School
